

## BOARD PROPERTY TESTER AND DENSITY PROFILE ANALYZER

**IBX800**

TO CARRY OUT LABORATORY TESTS FOR BOARD QUALITY CONTROL

The IBX800 laboratory testing machine has been designed to test the quality and mechanical characteristics of wood-based panels (particleboard, MDF, OSB, plywood and pallet blocks) and to then process the results obtained. The IBX800 combines simplicity of use with safe and reliable operation thanks to a microprocessor which controls the data measurement process and file management. It comes complete with a set of accessories to conduct all the tests in full compliance with today's standards (European standards, North American standards and others upon request).

**X-RAY DENSITY PROFILE ANALYZER**

IBX800 is equipped with a device to measure density profile as well. The X-ray assembly consists essentially of an X-ray source and a receiver between which the sample is placed for the density profile analysis. The density profile sample-holder can hold several samples at the same time which are separated by spacers that come with the supply: the unit scans each sample automatically, hence facilitating the task of the operator.

**TESTS PERFORMED IN COMPLIANCE WITH EN EUROPEAN STANDARDS**

- Dimensions (EN 325) • Density (EN 323) • Tensile strength (EN319) • Surface soundness(EN311) • Screw holding(EN320) • Bending strength and Modulus of Elasticity(EN310).

**BEST IN CLASS FOR:**

WOOD BASED PANELS:  
PB/SPB  
OSB/LSB/FOSB  
MDF/HDF  
PLYWOOD

PRESSED WOOD PACKAGING:  
PALLET BLOCKS

**OTHER TESTS FOR WHICH IT IS POSSIBLE TO COLLECT AND STORE DATA IN THE IBX800 DATABASE, IN CONJUNCTION WITH OTHER EQUIPMENT:**

- Swelling and absorption (EN317) • Cyclic test in wet conditions (EN321) • Moisture content (EN322) • Boil test (EN1087-1) • Formaldehyde content (EN ISO 12460-5 / 12460-3) • Surface absorption(EN382) • Dimensional changes according to humidity (EN318) • PB, MDF and OSB moisture values • Particle / fiber screening test • Sand content • Hardness.

It is possible to supply, upon request, the apparatus required for carrying out other EN tests (such as the EN314-1 for plywood for example) or tests in compliance with ASTM, NZS, JIS standards. Apparatus may also be supplied for some particular tests which, although they are not standard, are nevertheless required by some board manufacturers.

The operator can programme and carry out the tests which need to be conducted to control the quality of the board produced with simple operations. The user interface combines top level graphics with the most modern software technology for filing data and the subsequent data search. All the data are stored in an SQL server database, from where they may be exported to other applications, like Excel for example, and/or printed (in graph form and/or as a numerical report). It is possible to connect the database up to the plant network to share all the test results. The software has features that will help the operator to carry out the tests, such as for example a photograph showing which tools to use for a particular test and a short video tutorial.

A QR code reader may be installed as an optional for the automatic identification of samples prepared by the IMAL SMC200, to save time and avoid human error.

IBX800 can import data from the DPX400 and DPX400-LTE density profile meters.
