

## RECTANGULAR EXTRACTORS MOVING FLOOR

This machine is designed to extract shavings, sawdust, wood fibre, wood chips and scrap from a rectangular shaped silo.

### TECHNICAL FEATURES

- The extractor is carried out by means some strong bars moving on slides placed on the silo floor
- The bars are connected with some strong V-section beams able to transport the material to the discharging point
- Each bar is driven by an hydraulic cylinder
- The continue translation of the V-section beams installed on the bars permit to carry out the discharging of the material
- An hydraulic unit guarantees the coordination of the longitudinal excursion of the bars.

### BENEFITS

- Wide range of extraction
- Easy modularity of the machine
- Possibility of metal structure or reinforced concrete
- Installation also overground
- Very low maintenance cost.
